

SOME GREAT IT CAPSTONE PROJECT TITLES

- Review intelligent systems for business decision making
- Computer visual recognition systems
- Network and data security
- Satellite equipment automation
- Emergency data recovery plans
- Automation of accounting documents
- Intranet technical support
- Automation of materials taken from storage
- Radio frequency ID security
- Network navigation systems
- Graphical modeling of biological systems
- Machine scheduling and game theory
- Analysis of medical imaging
- Algorithm analysis using game theory
- Neural networks and stock prediction
- Translation and machine learning
- Remote evaluation of medical patients via wearable tech
- Symbolic storage and identification systems
- Using open source change logs to detect linguistic errors
- Medication tracking app development
- Gym routine development app using available equipment
- Interactive e-book reading programs.
- Developing a GUI for CGMiner tools
- Design space analysis of image segments
- Departmental data collection and analysis
- Develop an EEG device using microprocessors
- Create a graphic zipper folding program
- Develop a WordNet visualization program
- Explore data sets using derived formulas
- Construct an online survey system
